Vishwjeet Chavan

Creative Technologist • Spatial Developer • github.com/vishwjeetlol

PROFESSIONAL SUMMARY

Creative technologist and spatial frontend engineer specializing in real-time WebGL, Three.js 3D graphics, custom GLSL shaders, and physics-driven spatial web interfaces. Proven experience building sub-second high-performance interactive web applications, virtual exhibition pavilions, and procedural Web Audio engines.

CORE COMPETENCIES

- **3D & Graphics:** Three.js (r160), WebGL, GLSL Shaders, Blender (Python headless pipeline), CSS 3D Transforms.
- **Frontend & Systems:** TypeScript, JavaScript (ESM), Vite, HTML5, CSS Spatial Tokens, Web Audio API, Playwright.
- **Performance & Architecture:** Sub-second production bundling, spotlight pooling, distance culling, zero-layout-shift UI.

SELECTED PROJECTS

The Museum of Three.js (3js-museum) — 2026

WebGL / Three.js / GLSL / Vite

- Engineered an interactive 3D virtual exhibition pavilion featuring 22 procedural exhibits, GPU vertex curl shaders, and dynamic spotlight pooling.
- Achieved sub-second production builds (384ms across 24 code-split chunks) and sustained 60 FPS performance via distance culling.

Classic Tata Truck Cabin Simulator & The Bazaar — 2026

HTML5 / Web Audio API / Tailwind CSS

- Developed a first-person cabin simulator of a classic Tata 1613 SE truck with real-time procedural frequency-modulated engine revving and horn synthesis.
- Designed "The Bazaar", a wide-canvas horizontally draggable panoramic portfolio interface.

Nepo Baby Magazine Digital Experience Suite — 2026

HTML5 / CSS 3D / Three.js / Blender 3D

- Built maximalist interactive web toys including 3D book mockups with real-time user artwork injection, iTunes-style cover flow, and draggable polaroids.
- Integrated interactive 3D turntable rendering with custom typography and marquee text loops.
